## Homepage

- On Home we going to ask some information from the user to schedule the job at a certain time for a certain name along with the email id of the user:

The screenshot shows a web browser window with the address bar displaying '127.0.0.1:5000'. The browser's tab bar includes several open tabs: 'Decision Tree Grid...', 'FlowCV', 'Homeworkify.Net >...', 'Dashboard', 'Free SEO & Digital...', 'GPT-2 Output Dete...', and 'Paraphrasing Tool >...'. The main content area of the browser displays a form titled 'Schedule Job'. The form contains three input fields: 'Name:', 'Date and Time: (YYYY-MM-DD HH:MM):', and 'Email:'. Below these fields is a 'Submit' button. The browser's status bar at the bottom shows the system clock as 9:04 PM on 2/3/2023, along with weather information (15°C Clear) and various system icons.

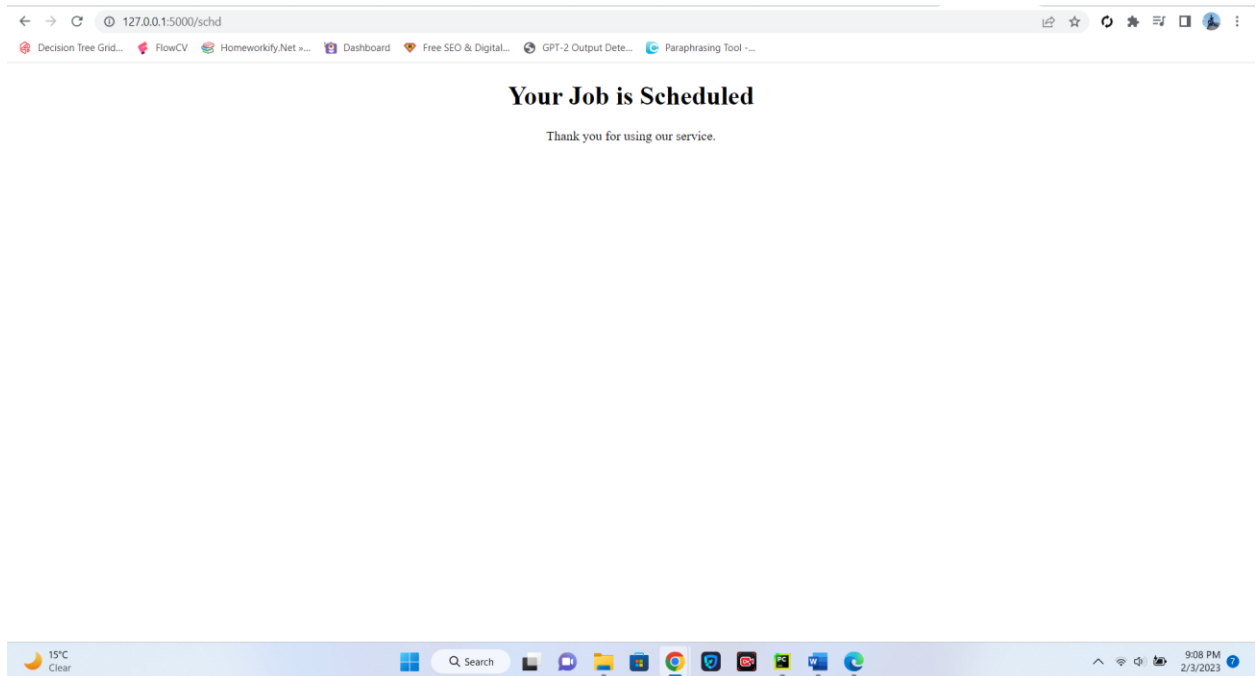

**Schedule Job**

Name:

Date and Time:  (YYYY-MM-DD HH:MM):

Email:

- If the user provide all the information right we means if user provide a wrong email id or a invalid email id it will return the home page with a error that check the mail id else it will thank the user to use our service:

- Ones the scheduled time pass it will send a mail to the mail id provided by the user along with the path of the files stored in a specific folder because we implemented it our local machine only.
